Sustainable, unique and durable cutting and serving boards

Sustainable, unique and durable. Three features that characterize our Finest cutting and serving boards. Sustainable as they are made of many thin layers of recycled (news)paper and wood fibers, which is firmly pressed together with resin. By this, a strong material is created that forms a durable basis of our boards. They can withstand temperatures up to 176 °C, are dishwasher safe, gentle on your knives and certified on all aspects. A product that lasts, guaranteed. Not to forget:

unique. A fairly new material, with many benefits, which is yet to be discovered by many.

Our motto is: everything is possible. We are able to make custom designs, tailored to your wishes, all made in Holland. A custom shape, logo or text? No problem. Interested in developing a private label or would you like to become a dealer of our Finest boards? Seek contact, we are happy to help!

Our permanent collection
